

## FRONT RANGE AIRPORT MISSION STATEMENT

The expanding demand for Air Transportation requires a commitment to safety, efficiency, operational growth and capacity. To sufficiently meet the demands of a global economy, the Front Range Airport Authority will promote Front Range Airport as an economic engine for the region and will develop it to be a model for aircraft operations, efficiency and safety.

With close proximity to Union Pacific Railroad and Interstate Highway 70, and runways that can be developed to accommodate large aircraft, Front Range Airport has the ability to become a prominent intermodal hub.

The Front Range Airport Authority will not seek regularly scheduled passenger service. The future expansion shall be directed to General Aviation and Air Cargo. Incremental expansion based on growing use by General Aviation will continue to be the focus of Front Range Airport. The Authority will continue to maintain and update an Airport Layout Plan and Master Plan as dictated by the Federal Aviation Administration and will keep an updated business development plan based on fiscal ability, and operational efficiency.

The Authority recognizes it's responsibility and role with Adams and Arapahoe Counties, the City of Aurora and the towns of Bennett, Strasburg and Watkins in future development of the property surrounding Front Range Airport and therefore pledges it's commitment of cooperation in actions of importance to the well being of all their citizens.

Front Range Airport will provide its tenants, users, business community, and the citizens of Adams County, the State of Colorado and the United States a progressive General Aviation Airport.
